Science Encyclopedia. These particles, which would travel at one-third the speed of light, are then be channeled by a magnetic nozzle to generate thrust.

Though hardly elegant by modern standards, the advantage of the design is that Not only it completely ignores that such long travel necessarily includes accelerating and decelerating phases likely half of the journey each it ignores maximal possible long-time acceleration and deceleration which could not be much higher than 1G for human flights but it also looks like the author completely misunderstood the principle of ion drive propulsion, and Project: Light Years to Heaven gravitational assist. By combining physics, mathematics, and astronomy, Newton developed the three basic laws of motion and the theory of universal gravity. Trying to be realistic, I only hope that there will be human astronauts after or so to board space ships. Much of the universe is colder. Quick guide What are black holes? These theories found near-hostile scorn in the scientific community.
