Scorpions, often misunderstood and persecuted, have captured the imagination of humans from early times, but only recently have we begun to understand their complex behaviour and biology. Syst Biol ;

Scorpions are mostly active during the summer months and most species are nocturnal.

Tremors and involuntary movements are pronounced. I think that it is because I knew that these species had the ability to kill me if I got stung that I paid more attention when dealing with them, and gave them more respect.

Meanwhile, the majority of family and genus names do not have common names equivalent to their scientific names.

It might be that this unnatural appearance is used to deter predators, just as frogs use aposematic colouring to warn their enemies that they are poisonous?
